

# SOLVAir® Breeze

SO<sub>3</sub>

Trona

SO<sub>2</sub>

Sodium Bicarbonate

HCl

## TRONA ROCKS!

If you've been wondering about trona, what it is and how it treats air pollutants in stack gases, look no further. All the information you need is a click away - <http://www.solvair.us/products/select200/0,,59168-2-0,00.htm>!

A naturally occurring mineral, trona is used primarily to make soda ash, which in turn is used in glass manufacturing and medicine, to name but a few end uses. For air pollution control in dry sorbent injection systems, trona reacts with acid gases to form a product that removes SO<sub>2</sub>, SO<sub>3</sub> and HCl cost-effectively and without harming equipment. Field testing has shown removal rates of SO<sub>x</sub> greater than 90%.

Located in Green River, Wyoming, Solvay Chemicals' trona mine is part of the largest deposit in the world. Approved by the EPA or the appropriate State Regulatory Agency for air pollution control, trona is non-hazardous, and non-flammable.

Trona has been used to treat stack gas pollutants in power plants for over 20 years. For dependability and effectiveness, [Trona Rocks!](#)
