Air Quality Alert! Eliminate SO₂ with Dry Sorbent Injection of Trona or Sodium Bicarbonate

The Air Quality VII Conference, October 26-29 in Arlington, Virginia, is an ideal platform for the SOLVAir Group's presentation, "Dry Sorbent Injection of Trona and Sodium Bicarbonate for SO₂ Mitigation," a particularly appropriate topic for this conference.

Dry Sorbent Injection of sodium sorbents has emerged as an important SO₂ and SO₃ mitigation technology due to its low capital cost, small installation, ease of operation, and flexibility to fuel changes. SOLVAir Products offers two options for this application.

SOLVAir Select 200 trona is often used as the main sodium sorbent due to its relatively low price. However, for some power plants where higher SO₂ removal rates are desired and the amount of generated fly ash needs to be minimized, Select 300 sodium bicarbonate is an excellent alternative.

For more information on these two effective SOLVAir products, join us for our presentation at [Air Quality VII](#), go to www.solvair.us, or contact Michael.Wood@solvair.com.
